

The NewsBreakers — installation

Animal-health observatory (screwworm, avian flu, classical swine fever). The app opens to the watch room. There is no account or license key. Use the ES | EN button in the header to switch the interface language.

What you need

- Windows: Python 3.12 (tick PATH), Node.js LTS, Git. Inno Setup 6 is optional for the .exe installer.
- macOS: python3, node/npm (Homebrew if missing). For the .app: bash packaging/mac/make_dmg.sh.
- Linux: python3, node/npm. python packaging/build.py.

Windows (on the Windows PC)

Do not build the .exe on a Mac.

```
cd %USERPROFILE%\Desktop
git clone https://github.com/JAVGP444/the-newsbreakers-framework.git
cd the-newsbreakers-framework
python -m venv .venv
.venv\Scripts\activate
python -m pip install -U pip
python -m pip install -r requirements.txt pyinstaller pywebview
cd frontend
npm install
set VITE_API_URL=
npm run build
cd ..
python packaging/build.py
```

Output is dist\NewsBreakers\NewsBreakers.exe. Data lives in %APPDATA%\TheNewsBreakers. With Inno Setup: packaging/windows/setup.iss → NewsBreakers-Setup.exe.

macOS

```
cd ~
git clone https://github.com/JAVGP444/the-newsbreakers-framework.git
cd the-newsbreakers-framework
bash packaging/mac/make_dmg.sh
```

Drag NewsBreakers.app to Applications. For development: mac/Instalar-y-abrir.command (right-click → Open the first time). Stop: mac/detener.command.

Linux and development

Development: linux/abrir.sh or windows/abrir.bat. Stop: linux/detener.sh or windows/detener.bat. MySQL via Docker is optional; SQLite opens the dashboard.

Guides in the repo: README.md (Spanish and English), mac/README.md, windows/README.md, linux/README.md.
